Scenario:

You are a senior in college trying to juggle both school work and your job. You barely have time to feed yourself on the daily but now add to the fact that you're vegan which makes it so that you have to watch what you eat. You would love the ability to order vegan food as fast as possible and with as many options as possible in the area around you.

Task 1: You must order from a familiar restaurant food that you know is vegan options. Order what you normally would (Drink, entree, dessert)

Task 2: You want to order from an unfamiliar place that based on your built profile reports that it offers vegan options. (Appetizer, Entree, Dessert, and anything else)

Task 3: You want to order and are on a time crunch and money crunch, so order from a place with minimal money signs and show that they offer the quickest line and order service.

Notes:

What changes you should make to your application:
1) Make a place to edit profile in case information and diet restrictions change
2) The ability to star restaurants that you know and like so they are easier to find and order from/ the ability to have preset orders
3) Ability to input specific diet restrictions that are typical

What you need to keep the same for your application:
1) The order confirmation and order status
2) The small summary of each restaurant and price range before opening the entire menu and next screen
